1. Role Definition

The Servicing Event History service domain captures the details of servicing activity to support root cause analysis. The information captured can include summary details of the servicing activity, product access details and click-stream/voice records as necessary. The captured detail can be analyzed for staff assessment and training and to support procedural refinements

2. Example of Use

A servicing contact is concluded and the contact details and result is captured. In cases the call is recorded

3. Executive Summary

This service domain captures, classifies and stores servicing activity and events to support root cause analysis

4. Key Features

Log customer servicing event activity for the representative

Log servicing issues and other activity

Support servicing log data extracts

Maintain activity statistics and accumulators
